Digital Transformation

Is your IT aligned with your business strategy?

Less than half of IT budgets are spent on business growth and digital transformation projects. The bulk of IT budgets go on day-to-day activities – keeping the lights on. When IT departments are running to stand still then it presents an opportunity for competitors to take advantage.

79%
CIOS BELIEVE IT SHOULD BE ALIGNED WITH BUSINESS GOALS. HOWEVER, 4 OUT OF 5 FIND IT A CHALLENGE TO ACHIEVE.

78%
CIOS SAY LEGACY SYSTEMS HINDER THE BUSINESS'S ABILITY TO ACHIEVE STRATEGIC AIMS.

56%
RESPONDENTS SAY THEIR IT DEPARTMENTS STRUGGLE TO MEET THE VOLUME OF REQUESTS FROM THE BUSINESS.

84%
IT DEPARTMENTS CITE INNOVATION AND NEW TECHNOLOGY AS BEST WAYS TO IMPROVE EFFICIENCY.

Managed service provision is about adding value to your business without incurring hefty capital costs. It can help your organization keep pace with an ever-changing technology landscape and ensure you retain your competitive edge.

SERVICE
Catalogue

Modern Networks have two decades of knowledge and experience providing advanced IT and telecoms solutions for enterprise clients and over a thousand commercial properties across the UK. Our highly skilled project teams design and implement solutions that transform your organisational aspirations and objectives into realities.

PC Services
After 3 years a standard PC will take twice as long to perform basic tasks as it did when new. Slow, buggy PCs are inefficient, unreliable and frustrating to use. Where you have older PCs that need replacing, Modern Networks offer a range of desktop and laptop computers as a managed service for a fixed monthly fee.

Networks
Modern Networks LAN/WAN offers superior computing performance, universal access to core business applications, enhanced security, automated backup and centralised administration. Modern Networks provides the reliable network infrastructure that today's organisations need to collaborate and innovate.
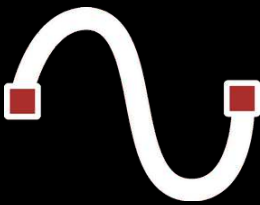

Cloud
Cloud-based services offer a number of business benefits. You only pay for the services you use. There's no capital expenditure to worry about or ongoing costs of maintaining IT infrastructure hardware. Cloud services are great for backup, disaster recovery and file storage.

Data Centre
Designed to support your organisation's growth, Modern Networks data centres provide the flexibility to increase or decrease storage as you need it. Our fully managed, continuously monitored services mean lower operating costs, greater data security, resilience and reliability.

Radd Telecoms
Modern Networks sister company Radd Telecoms is one of the UK's leading data cabling installers. Radd Telecoms provides fixed-price infrastructure network cabling solutions, high quality, cost-effective CCTV and secure access control systems.

Business Wi-Fi Service
We provide a business Wi-Fi service that includes wireless network connectivity for your team and segregated guest access. Our services are delivered through the Cloud and fully managed by Modern Networks.

Domain & Web Hosting
Modern Networks offers a domain purchasing and management service. The service includes the management of DNS records for email, web and any other addresses needed. We also offer a website hosting service for Microsoft Windows and Linux based websites.

Hosted VoIP Platform
Modern Networks can provide you with a dedicated telephony platform. Known as VoIP or Voice over IP it's telephony delivered over the Internet, which means no physical hardware onsite, greater flexibility, scalability and reduced costs. After all, you only pay for what you need. Select your preferred numbers. Naturally the system supports all standard features such as hold, transfer, call back when free and voicemail.

Service Desk
24/7 UK technical support. Modern Networks is a Gold member of the Service Desk Institute and our Service Desk runs according to ITIL (Information Technology Infrastructure Library) best practice.
