

The challenge

Are you spending a fortune on office printing? How much control and visibility do you have over who is printing what?

Many printer fleets are an assortment of different makes and models. They all need different inks and toners that never run out at the same time. You've got different maintenance schedules and support contracts.

The solution

Now, you can have complete control of your printer fleet. Modern Networks managed print solutions (MPS) take away the pain of managing your printer fleet. We provide you with the latest printers, copiers and A3/A4 multifunction devices.

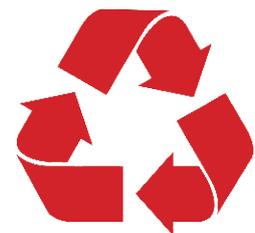

Support and replenishment

We monitor, manage and support your printer network. We automate ink and toner replenishment (so you never run out again), reduce administration, minimise waste and drive down costs.

Saving you money

We conduct an audit of your printer network. We look at usage, the types of printers you have, where they are located, running costs and capital expenditure. This 'big picture' approach enables us to identify any problems, inefficiencies and unnecessary costs. Based on our analysis, we will create a bespoke solution that will increase productivity, reduce waste and lower costs.

-  **50% UK businesses** have no idea how much they spend on print.
-  **Businesses** underestimate print costs by **40%**.
-  **The average UK office worker** prints over **6,000 sides of A4** each year.
-  **65% of documents** printed get thrown away the same day.
-  **The average cost of running a printer fleet** is **£148 per employee**.

Itemised billing

Many organisations seek to recover the costs of printing from their clients. Our managed print solutions enable you to assign print jobs to specific clients, departments and projects for itemised monthly billing.

Data protection

Your printer fleet has an important data protection role to play. Our secure print release function, for example, ensures documents are never left sitting in the printer tray, where anyone can read them.

You can impose role or rule-based access controls. Our printer activity reports and audit trails mean you always know who is printing what and when.

End-of-life security

We encrypt data on your printers and erase the hard drive when a printer reaches end-of-life, so the data can never be recovered.

Features & Benefits include:

- Reduce costs
- Wide range of A3/A4 multifunction printers & copiers
- Enhanced data security
- Role/rules based operation
- Itemised billing
- Automated toner readings
- Automated toner replenishment
- 24/7 remote & onsite support
- Detailed use analysis & reporting
- Save energy, less waste
