

Modern Networks Web Protection helps protect your business and users from Internet threats without blocking legitimate web use. It protects office based, remote and mobile workers from cyber attacks by blocking access to the most dangerous websites and web content automatically.

Our Cloud-based Web Protection service keeps your users and your business safe by containing Internet threats before they can have an impact. We have over 80 different controls that automatically filter out everything from malware to gambling websites. The service is easily tailored to meet your company's own Internet usage policies. Legitimate Internet use is unrestricted.

Delivery

Contact a member of the sales team who will be happy to quote you for this service.
