

Windows 10

Microsoft Windows 10 operating system offers an economical use of memory, increased security, improved file management, fast, responsive Internet-browsing and seamless integration with Office 365 productivity suite.

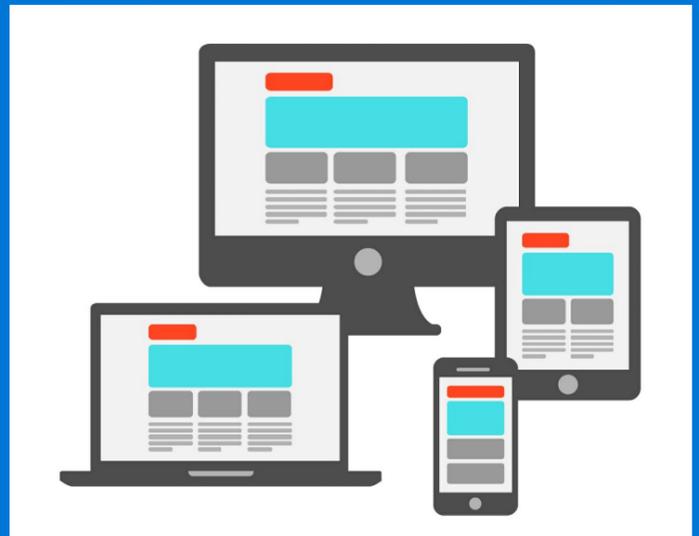

Windows 7 living on borrowed time

Microsoft will stop supporting Windows 7 with security updates on January 14, 2020. This means Windows 7 will be increasingly vulnerable to attack. Many third party applications will also stop supporting Windows 7. Gradually the operating system will wither and die.

Doubly secure

Windows 10 is significantly more secure than Windows 7. In fact, research by security firm Webroot found that Windows 10 is twice as secure at preventing malware infections as old Windows 7. Windows 10 has much improved identity protection, threat resistance and device security.

Work anywhere, on any device with Windows 10

Windows 10 is ideal for firms with a dispersed workforce. As long as you have an Internet connection, you can use Windows 10 and Office 365 applications anywhere, on any mobile device.

Productivity & collaboration

Windows 10 is a unified operating system for PCs, tablets, and phones. That makes it possible to run a single app across multiple devices. Windows 10 integrates seamlessly with Office 365 providing best-in-class productivity and collaboration tools.

Data protection regulations

Windows 10 provides file, folder and full-disk encryption with Microsoft BitLocker. Encryption safeguards data at all times. It prevents anyone altering your data by accident or maliciously. It also helps you comply with the latest data protection regulations.

Fast, responsive Internet search

Microsoft Edge is a fast, responsive, customisable Internet-browser fully integrated with Windows 10, making the most of AI technology and providing excellent security.

Modern Networks is a leading provider of IT, telecoms and technical support services to the UK's commercial property sector. The company has offices in Hertfordshire and Manchester. We are a certified partner for Cisco, HP, Microsoft, VMware, NetApp and Pure.
