

**Modern Networks server backup simplifies the backup and restoration of your servers, providing a comprehensive, automated, offsite backup of your data. By subscribing to the service, you can reduce the risk and impact of an outage or system failure, making it quicker and easier to restore.**

Server backup is critical to the smooth operation of your site. It helps reduce the risks associated with an unexpected outage and makes it quicker and easier to restore your systems following an incident. The simple, automated backup means your data is stored securely offsite where only you can access it, giving you peace of mind that you are covered if the worst does happen.
