£742 MILLION LOST TO INTERNET OUTAGES

Today, you simply cannot run your business without the Internet. In fact, Internet failures cost UK businesses £742 million in lost productivity and extra overtime in 2018. Without an Internet connection, your email and systems stop working, productivity slows down, your customers get frustrated and you lose revenue.

WEEKS LOST WAITING FOR FIXED LINE SERVICES

Depending on your provider, it can take weeks and sometimes months to get fixed line business broadband services setup for a new building. In the meantime, you're reliant on the local coffee shop's unsecured public WiFi or your smartphone as a slow, expensive mobile hotspot. It's no way to run a business.

Modern Networks 4G Rapid Deployment Service is the perfect temporary solution for any business that needs immediate Internet access while waiting for fixed line services to be installed. It's also a great way to tackle those costly unexpected Internet outages.

Typically, we can deliver next business day. Our 4G Rapid Deployment router comes preconfigured and ready to use out-of-the-box. Our 30GB per month data package provides fast, reliable, secure 4G wireless and mobile broadband. It's small enough to

fit in the palm of your hand and powerful enough to run your email and basic systems. The device will even notify you if a data top-up is required.

Modern Networks can remotely monitor usage and manage your device. Our UK Service Desk also provides fast, friendly technical support. Finally, once your fixed line broadband service is installed, our 30-day terms mean you can simply cancel your contract and ship the device back to us.
