

Cyber Security Assessment

In order to protect your business from cyber attack and comply with the latest data protection regulations, you need to understand where you are vulnerable. A Modern Networks Cyber Security Assessment (CSA) evaluates and reports on how vulnerable your network is to common threats.

Modern Networks will scan your business's IT systems and make a thorough assessment of your hardware, software, setup and access controls. Based on the CSA, Modern Networks will produce a detailed report on the current state of your IT security. The report will highlight all the risks based on severity level, and the actions needed to fix them.

Effective cyber security reduces the likelihood of a costly, damaging cyber attack. It also demonstrates compliance with data protection legislation and Cyber Essentials best practice.

Delivery

Please contact a member of the sales team to quote for this service.

Terms of service

Available as a one-time Cyber Security Assessment, or as part of a regularly scheduled managed security service. Service based on the provision of a current IT asset register.

Typically, a CSA is performed remotely, but occasionally requires an on-site survey, which is charged separately.

Features & Benefits

- Identify IT vulnerabilities and enhanced security
- Guard against business downtime
- Ensure network and employee productivity
- Protect corporate data
- Meet compliance obligations and avoid costly penalties
- One-off or on-going risk evaluation
- Demonstrate best practice with Cyber Essentials certification.
