

Security Awareness Training

Modern Networks Security Awareness Training (SAT) is an engaging, interactive online learning program, which educates employees about the latest cyber security threats, IT best practice and regulatory compliance.

Delivered in monthly modules with quarterly simulated phishing attacks, Security Awareness Training content includes:

- How to spot potential malware
- How to avoid phishing and other types of social engineering attack
- How to report security threats
- How to comply with the latest data protection regulations such as GDPR.

To ensure the content is always relevant and topical, our training modules reflects the current threat landscape, cyber security trends and IT best practice. Our online learning system tracks every user's participation, making all cybersecurity training accountable and measureable.

Delivery

Please contact a member of the sales team to quote for this service.

Terms of service

The service is provided on a 12-month agreement.

The service is modular with new training sessions delivered monthly and simulated phishing attacks quarterly.

User participation reports provided upon request.

The customer is responsible for notifying Modern Networks of new starters and leavers to be added or removed from the service.

Technical support is provided by Modern Networks Service Desk.
