

## Computer leasing

---

Is your business in dire need of new IT hardware? Many businesses know that they need to overhaul their legacy computer equipment but just keep putting off the decision because of the cost. Modern Networks computer leasing offers you the opportunity to access the latest hardware and services without breaking the bank. Here's how:

### Managing your finances

Computer leasing simplifies your IT financing and helps you to manage your budget for hardware and maintenance more effectively. A simple monthly fee makes it easier to manage your cash flow and predict future expenditure.

### Modernise your workplace and save money

Computer leasing enables you access the latest devices, services and support, without a huge upfront outlay. Having the latest IT equipment and services can significantly improve efficiency, reduce downtime and enhance security.

### The false economy of legacy hardware

Many companies struggle on with legacy equipment in an attempt to save money. However, this is a false economy. In fact, it often proves much more costly in the long run. Trying to extend the life of legacy equipment causes ongoing maintenance issues, increases security threats, reduces productivity and drains your budget. Computer leasing makes it a lot easier to replace legacy equipment.

## Computer leasing

---
