

# Customised Internet

## SERVICE SUMMARY

Every business is unique. Therefore, every business requires internet connectivity and IT services tailored to its specific needs. Modern Networks provides a range of custom internet solutions and bespoke network services. We can route internet traffic across multiple office locations ensuring an optimal service as if they were on the same internet network. Deploying a multi-site solution can help a business reduce costs and save time typically associated with managing several supplier relationships and services.

## KEY BENEFITS

- Latest internet technologies
- Additional IP addresses
- Purpose built internet services tailored to business needs
- Competitive pricing and flexible contracts
- Reliability and quality of service for VOIP, video conferencing, business applications.

## VALUE STATEMENT

As businesses grow and additional office space is required to facilitate that growth, many companies want to consolidate their IT infrastructure and connect their offices into a single entity. Linking IT services together will often provide cost savings as the IT infrastructure can be shared across multiple sites instead of each site requiring its own dedicated infrastructure. Centralised IT services also reduce the management overhead of maintaining multiple systems and provide a unified user experience for the organisation.

- Cost reduction of IT services
- Consolidate IT infrastructure across multiple sites
- Fast communication between offices
- Increase internet service resilience.
