

Cyber Security as a Service

SERVICE SUMMARY

Cyber security is not just one thing. Instead, it is a collection of people, processes, and technologies, which protect your IT systems and data. Effective cyber security reduces the likelihood of a successful cyber-attack and ensures your organisation can quickly recover should the worst happen. Good cyber security also demonstrates compliance with data protection legislation and best practice. Our Cyber Security-as-a-Service (CSaaS) is built on the firm foundation of the basic security safeguards we provide to all our managed service customers.

KEY BENEFITS

- Cyber security assessment reporting
- Security awareness training
- Risk registers of company assets and systems
- Vulnerability scanning and remediation planning.

VALUE STATEMENT

Our CSaaS solution helps organisations save time, money and stress associated with traditional cyber security solutions. CSaaS gives you comprehensive protection against common cyberthreats. It also provides visibility into the strengths of your current cyber security defences.

- Reduce the business risk from cyber security threats
- Educate business on threats and best security practises
- Reduce business recovery time following a cyber incident
- Meet compliance standards and obligations.
