

Device as a Service

SERVICE SUMMARY

Device as a Service (DaaS) is an OPEX lifetime management model for devices that your company uses including PCs, laptops, network equipment, servers and printers. DaaS simplifies lifecycle management including purchasing, managing, retiring, and refreshing devices. Apart from total loss insured scenarios, all the risk factors are with Modern Networks.

KEY BENEFITS

- Enterprise-grade device built to agreed company standards
- Next business day device replacement, including data restoration
- Included onsite installation of fixed devices
- Device lifecycle management so hardware remains up-to-date.

VALUE STATEMENT

Pay less up front and simplify the management of user and infrastructure devices across your organisation. Device as a Service enables businesses to move to a consumption-based model for hardware. When devices are no longer required, they can be returned after the initial term offering costs savings to the business. Faulty devices can be quickly replaced reducing the potential impact to the business and staff productivity.

- Improved device fulfilment outcomes with faster turnaround
- Minimise impact of failed or lost/stolen devices
- No unexpected repair, redeployment or replacement device costs
- Devices refreshed every 3-5 years with latest models.
