Server support

SERVICE SUMMARY

Servers are the life blood of many organisations. They enable you to setup computers, run a variety of applications, host web services and much more. As the backbone of your organisation, it's essential your servers are managed by experts. Our Server Support offers the remote and onsite technical expertise your organisation needs. Modern Networks will ensure your servers are properly maintained with the latest operating systems and security patches. Additionally, we will monitor your servers to ensure any potential issues are quickly identified and dealt with by our expert team.

KEY BENEFITS

- Fast, reliable technical Server Support
- 24/7/365 monitoring of your servers ensures early warning of potential issues
- We are Microsoft accredited Server and Advanced Storage Device specialists
- On-site server specialists
- Out-of-hours support for business-critical incidents.

VALUE STATEMENT

Common server issues such as power outages, poor configuration and failure to keep firmware up to date can have an adverse effect on business operations. Regular maintenance and monitoring of your servers will help ensure they run as smoothly as possible. We will also safeguard your servers from common cyber threats and advise on how best to improve server resilience.

- Complex and time-consuming Server Support handled by experts
- Properly managed servers providing managed user access, applications and security
- Maximise uptime and availability of services
- Focus your limited resources on core business activities
- Professional Server Support is cost effective.
