Network-as-a-Service

SERVICE SUMMARY

Network as a Service provides you with the core IT infrastructure that your business needs, as a convenient, cost-effective managed service.

VALUE STATEMENT

Network as a Service is an attractive alternative to traditional IT infrastructure projects that typically require a significant long-term investment of time, resources and money. Modern Networks will provide your IT infrastructure, taking full responsibility for the design, delivery, management and maintenance of your network, based on a 36 or 60-month service agreement.

KEY BENEFITS

- Reduced and predictable costs
- Proactive maintenance
- Service Level Agreements (SLA) guarantee levels of availability, network uptime, and response and resolution times for addressing issues
- Improved network service quality
- Maximised performance and increased productivity
- Optimised systems ensure the network operates efficiently
- Access to technical expertise and experience.
