Strengthen your Cybersecurity today

Research suggests businesses should
up their game on Cybersecurity

Key Findings

- 69% of UK small businesses use weak passwords. 47% lack up-to-date anti-virus software.
- 15% have no firewall protection.
- 48% don't provide cybersecurity awareness training. 29% have no patch management.

Impact

- 49,000 instances of fraud due to cyber-attacks.
- Average cost of a digital attack: £15,300.

Key Actions

**Security Awareness
Training for all staff.**

**Adopt a Zero Trust
Architecture to verify
every access request.**

**Implement controls and
certify to the UK Cyber
Essentials scheme.**

**Develop and update an
incident response plan.**

**Adopt and ensure adherence to
cybersecurity policies, including
an acceptable user policy.**

**Implement vendor and
third-party risk
management.**

**Multi-Factor
Authentication (MFA) adds
an extra layer of security.**

**Ensure regular software
updates and patch
management.**

**Conduct regular security
audits to identify
vulnerabilities.**

**Continuously monitor
network traffic for
suspicious activities.**

**Encrypt data both at rest
and in transit.**
